

Journal Entry 2.5

1. In your own words, explain Django static files and how Django handles them.
Django static files usually include JS files, CSS, images, and certain other ones. As their name suggests, they do not change and are used during project creation to customize the look of the app.
2. Look up the following two Django packages on Django's official documentation and/or other trusted sources. Write a brief description of each.

| Package | Description |
|------------|--|
| ListView | This refers to a view to display multiple instances in a table in a database. (A page representing a list of objects) |
| DetailView | This refers to a view to display one instance in a table in a database. This is used to present details of a single instance in a model. |

3. You're now more than halfway through Achievement 2! Take a moment to reflect on your learning in the course so far. How is it going? What's something you're proud of so far? Is there something you're struggling with? What do you need more practice with? You can use these notes to guide your next mentor call.

The last two tasks were challenging learning about how to set up the structure of a Django application, but by the end it became more natural. I am proud of my work so far and the way my app is looking. I definitely need more practice with writing in Python but the more I write the better I am getting.

I like this website because it has a menu bar with a search bar, a login function to save recipes, and different sections to look through recipes.
